

Repriza[®] Acellular Dermal Matrix

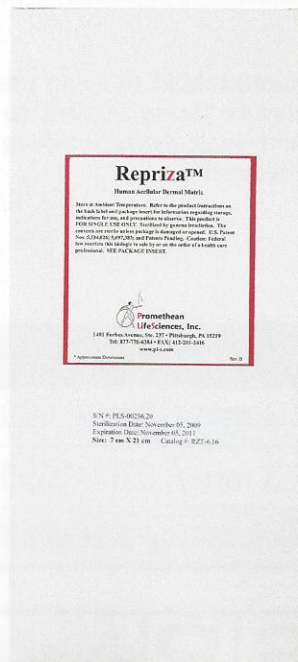

From human skin allograft

The performance you need...

Repriza[®] is an acellular dermal matrix developed by Promethean LifeSciences, Inc. Made from human skin allograft, Repriza is the result of proprietary and patented processes designed to provide the implantable skin graft of choice.

It is well-suited to any application for which human dermis has historically been used, such as breast reconstruction.

Repriza is membrane-free and requires no orientation for tissue in-growth.

...the attributes you want

Repriza is ready to use whenever you need it. It comes sterile, pre-hydrated and can be stored for up to two years at ambient temperature.

Single-use Repriza is double peel-pouched, enabling the inner pack to be opened in the O.R. for immediate product implantation. You can select from stock sizes, or request a custom configuration to meet your requirements.

Convenient and performance-driven, Repriza is competitively priced, and even more economical when bundle-purchased with our industry-leading tissue expanders.

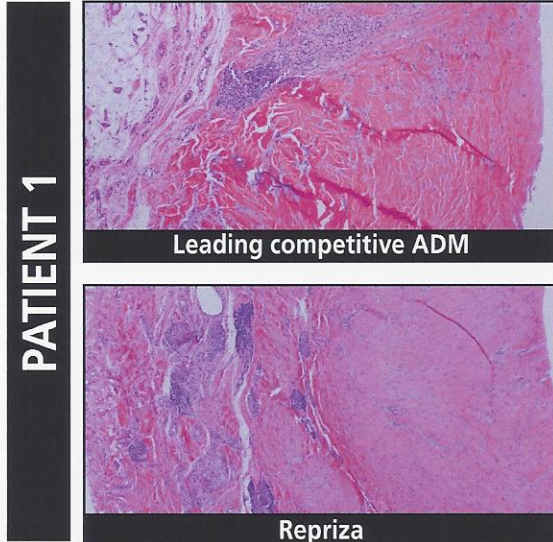

SPECIALTY SURGICAL PRODUCTS, INC.

Repriza[®] Acellular Dermal Matrix

Experience its benefits, discover its performance

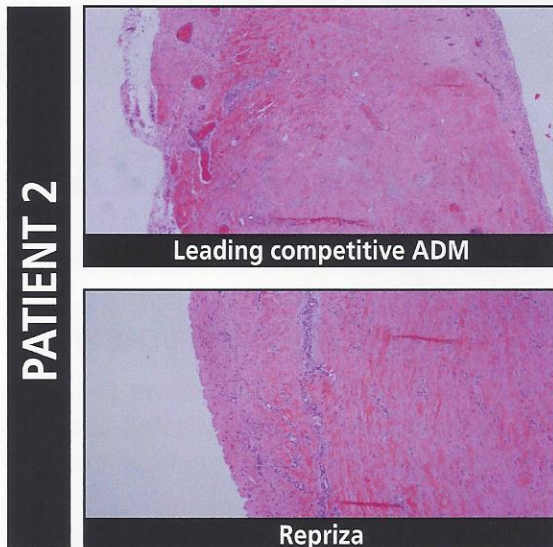

Biopsies of Repriza[®] and a leading competitive tissue from contralateral sides of two patients after insertion of acellular dermal matrix (ADM) and tissue expanders:

- Supplied sterile
- Pre-hydrated
- Orientation unnecessary
- Ambient temperature storage
- Competitively priced
- Double peel-pouch configuration
- Custom sizing available
- O.R. convenience
